Continuation of 11. does NOT place the application in condition for allowance because: The applicant's arguments have been considered but are not persuasive.

In response to the applicant's arguments that Rezai teaches away from the use of foam layers and the combination of Rezai with the teachings of Grafe is based on hindsight, it is noted that the layers of Rezai and Grafe are both provided for the same function. Rezai discloses a need for a layer that exhibits rapid acquisition of liquids (see column 2, lines 1-5). Grafe teaches that cellulosic foam provides a greater wicking ability, and therefore a faster acquisition rate, than cellulosic fibers (see column 21, lines 18-21). Grafe teaches a way to improve the property, acquisition rate, that Rezai wishes to optimize. Therefore, it would be obvious to one of ordinary skill in the art to replace the cellolosic fibers of Rezai with the cellulosic foam of Grafe. It is noted that since the foam and the fibers are materially different, it would also be obvious that one would not form the foam layers by the method disclosed by Rezai for forming the fibrous layers. However, since Rezai teaches the importance of the layered structure having no clear partitioning between the layers, it would be obvious to maintain this important feature whether the layers are formed of cellulosic fibers or foam.
